Today on the Reschexpert blog we want to show you a quick easy way to create your own free Rescheck using the Department of Energy's Rescheck Desktop software. Sometimes the actual dowload for the software suite of Rescheck Desktop can be difficult to find on the Department of Energy's website so we wanted to give the DIY Rescheck creators an easy to use tutorial on how to get the latest Rescheck Desktop software onto your workstation quickly and most importantly, for free.

Your first step is going to be to open the browser of your choice and then navigate to:

https://www.energycodes.gov/rescheck

What you will then see is this:

Rescheck Desktop Download[/caption]

Here comes the tricky part, once you have navigated to the Rescheck page on the energycodes.gov you need to scroll all the way to the bottom right hand side of the page. There you will see a label called "Download" and underneath it, it will show a .exe file of the current Rescheck Desktop build that is available from the Department of Energy. Once you slide your mouse over the top of this hyperlink to download Rescheck Desktop a bubble pops up that says "Open File In New Window". If your wish is to Download Rescheck Desktop for Free (which I assume is why your are reading this far into the article) then you would simply click the hyperlink to open the file in a new window.

https://www.rescheck.info/2020/06/09/rescheck-desktop-download-4-7-1-missing-many-codes/

You have now downloaded Rescheck Desktop and will need to install it on your workstation. At this point you can go through and create your own Rescheck offline. If you need to use the Rescheck Web version it is available at the top of the same page. Here is a quick navigation link to visit there https://www.energycodes.gov/rescheck
